

Easy Data Lakehouse Operations with Zero-Copy Clones and Multi-Table Transactions

Agenda

- Data Lakes \rightarrow Data Lakehouses
- What is Dremio Arctic?
- Zero-Copy Clones with Git for Data
- A Git for Data Use Case: Multi-Table Transactions
- Demo
- Q&A

Cooperative Data Architecture: Data Lakes + Warehouses

We've Had Query Engines on Data Lakes for a While...

Data Lake Engines

...But Customers Needed a Way to Manage it

Dremio Arctic is a Data Lakehouse Management Service

Dremio Arctic is a Modern Lakehouse Catalog

ICEBERG-NATIVE

- Nessie (the Arctic catalog) is built into the open source Apache Iceberg project
- Use a variety of Iceberg-compatible engines including Dremio Sonar, Spark and Flink

ACCESS CONTROL

- Table, column- and row-based access control
- Custom roles and integration with existing user/group directories (AAD, Okta, etc.)

Automatic Optimization Makes Data Lake Management Easy

Schedule Compaction Date	e time
	Target file size (MB)
	Min. input files (MB)
Compaction Rule	Min. file size (MB) Max. file size (MB)

Schedule the Next Garbage	e Collection		
The next garbage collection will	be scheduled at	Apr 4, 2022, 9:	DOPM
	Every	month	~
	On	4 day	of every month
Data Retention Period	At (21:00	
3			
•			

TABLE OPTIMIZATION

- Dremio Arctic automatically rewrites smaller files into larger files and groups similar rows in a table together.
- Table optimization significantly accelerates query performance.

s sa 🖉 dremic

TABLE CLEANUP

- Dremio Arctic automatically removes unused manifest files, manifest lists, and data files.
- Cleanup runs in the background and ensures efficient use of data lake storage.

ISOLATION

- Experiment with data without impacting other users
- Ingest, transform and test data before exposing it to other users in an atomic merge

Data_Wave

VERSION CONTROL

- Reproduce models and dashboards from historical data based on time or tags
- Recover from any mistake by instantly undoing accidental data or metadata changes

GOVERNANCE

- All changes to the data and metadata are tracked: who accessed what data and when
- Fine-grained privileges to control access to the data at the table, column and row level

10

Use Case - Multi-Table Transactions

Problem: I have multiple tables that I need to update, but I don't want to expose my users to the changed data until all of the tables have been updated.

Use Case - Multi-Table Transactions

Solution: Create a branch, make the necessary changes to your tables, and then perform a merge.

Changes to the main branch are made atomically, so no one sees an impartial view of the data.

Ready to Give it a Try?

Dremio Arctic is now the default catalog in Dremio Cloud, so every new project will get a Dremio Arctic catalog!

Expand what your semantic layer can do for you with:

- Automatic Optimization of your Iceberg tables
- Catalog versioning with data as code
